Patient Pocket Guide
A guide to identify signs and symptoms of potential side effects while on immunotherapy, including immune-mediated side effects

1. Detach the wallet card and keep on your person at all times
   - Fill out the treating oncologist’s contact information

2. Read the information inside and use the Signs and Symptoms Checklist to recognize what to report immediately
   - Call your treating oncologist right away if you experience anything unusual while on OPDIVO or OPDIVO + YERVOY therapy
   - Contact your oncologist immediately if you experience any symptoms listed on this Signs and Symptoms Checklist, or they get worse. **Getting medical treatment right away may keep the problem from becoming more serious**

3. Show this wallet card during any urgent care/emergency room visit
   - Tell the urgent care/emergency room staff that you are being treated with OPDIVO or OPDIVO + YERVOY and show them the “doctor/nurse” section of this wallet card

**Please call my oncologist.**
I have received an immunotherapy called:

Please see Important Safety Information for OPDIVO and YERVOY, including Boxed WARNING for YERVOY regarding immune-mediated side effects, on pages 4-6 and the U.S. Full Prescribing Information and Medication Guide for OPDIVO and YERVOY.
Keep this guide handy for your reference. This guide includes a helpful checklist of Signs and Symptoms for you to closely monitor. Call your Oncology Care Team if you have any of these signs or symptoms, or if they get worse. These are not all of the possible side effects of OPDIVO® (nivolumab) and OPDIVO + YERVOY® (ipilimumab). This is why you need to report any discomfort or changes in the way you are feeling to your Oncology Care Team.

Complications of stem cell transplant that uses donor stem cells (allogeneic). These complications can be severe and lead to death. Your healthcare provider will monitor you for signs of complications if you have an allogeneic stem cell transplant.

Additional serious side effects of YERVOY alone include: nerve problems that can lead to paralysis; and eye problems.

Please see Important Safety Information for OPDIVO and YERVOY, including Boxed WARNING for YERVOY regarding immune-mediated side effects, on the following page and the U.S. Full Prescribing Information and Medication Guide for OPDIVO and YERVOY.
Important Safety Information for OPDIVO® (nivolumab) and YERVOY® (ipilimumab)

OPDIVO is a medicine that may treat certain cancers by working with your immune system. OPDIVO can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become serious or life-threatening and can lead to death. These problems may happen anytime during treatment or even after your treatment has ended. Some of these problems may happen more often when OPDIVO is used in combination with YERVOY.

YERVOY can cause serious side effects in many parts of your body which can lead to death. These problems may happen anytime during treatment with YERVOY or after you have completed treatment.

Serious side effects may include:

- **Lung problems (pneumonitis).** Symptoms of pneumonitis may include: new or worsening cough; chest pain; and shortness of breath.

- **Intestinal problems (colitis) that can lead to tears or holes in your intestine.** Signs and symptoms of colitis may include: diarrhea (loose stools) or more bowel movements than usual; blood in your stools or dark, tarry, sticky stools; and severe stomach area (abdomen) pain or tenderness.

- **Liver problems (hepatitis).** Signs and symptoms of hepatitis may include: yellowing of your skin or the whites of your eyes; severe nausea or vomiting; pain on the right side of your stomach area (abdomen); drowsiness; dark urine (tea colored); bleeding or bruising more easily than normal; feeling less hungry than usual; and decreased energy.

- **Hormone gland problems (especially the thyroid, pituitary, adrenal glands, and pancreas).** Signs and symptoms that your hormone glands are not working properly may include: headaches that will not go away or unusual headaches; extreme tiredness; weight gain or weight loss; dizziness or fainting; changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness; hair loss; feeling cold; constipation; voice gets deeper; and excessive thirst or lots of urine.

- **Kidney problems, including nephritis and kidney failure.** Signs of kidney problems may include: decrease in the amount of urine; blood in your urine; swelling in your ankles; and loss of appetite.

- **Skin Problems.** Signs of these problems may include: rash; itching; skin blistering; and ulcers in the mouth or other mucous membranes.

- **Inflammation of the brain (encephalitis).** Signs and symptoms of encephalitis may include: headache; fever; tiredness or weakness; confusion; memory problems; sleepiness; seeing or hearing things that are not really there (hallucinations); seizures; and stiff neck.

- **Problems in other organs.** Signs of these problems may include: changes in eyesight; severe or persistent muscle or joint pains; severe muscle weakness; and chest pain.

Continued on next page
Important Safety Information for OPDIVO® (nivolumab) and YERVOY® (ipilimumab) (cont’d)

Additional serious side effects observed during a separate study of YERVOY alone include:

- **Nerve problems that can lead to paralysis.** Symptoms of nerve problems may include: unusual weakness of legs, arms, or face; and numbness or tingling in hands or feet.

- **Eye problems.** Symptoms may include: blurry vision, double vision, or other vision problems; and eye pain or redness.

Getting medical treatment right away may keep these problems from becoming more serious.

Tell your healthcare provider about:

- Your health problems or concerns if you: have immune system problems such as autoimmune disease, Crohn’s disease, ulcerative colitis, lupus, or sarcoidosis; have had an organ transplant; have lung or breathing problems; have liver problems; or have any other medical conditions.

- All the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

The most common side effects of OPDIVO when used alone include: feeling tired; rash; pain in muscles, bones, and joints; itchy skin; diarrhea; nausea; weakness; cough; shortness of breath; constipation; decreased appetite; back pain; upper respiratory tract infection; fever; headache; and abdominal pain.

The most common side effects of OPDIVO, when used in combination with YERVOY, include: feeling tired; rash; diarrhea; nausea; fever; pain in muscle, bones, and joints; itching; abdominal pain; vomiting; cough; decreased appetite; and shortness of breath.

The most common side effects of YERVOY include: feeling tired; diarrhea; nausea; itching; rash; vomiting; headache; weight loss; fever; decreased appetite; and difficulty falling or staying asleep.

These are not all the possible side effects. For more information, ask your healthcare provider or pharmacist. Call your doctor for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

YERVOY (5mg/mL) is an injection for intravenous (IV) use.

Tell your healthcare provider about:

- Your health problems or concerns if you: have immune system problems such as autoimmune disease, Crohn’s disease, ulcerative colitis, lupus, or sarcoidosis; have had an organ transplant; have lung or breathing problems; have liver problems; or have any other medical conditions.

- All the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

The most common side effects of OPDIVO when used alone include: feeling tired; rash; pain in muscles, bones, and joints; itchy skin; diarrhea; nausea; weakness; cough; shortness of breath; constipation; decreased appetite; back pain; upper respiratory tract infection; fever; headache; and abdominal pain.

The most common side effects of OPDIVO, when used in combination with YERVOY, include: feeling tired; rash; diarrhea; nausea; fever; pain in muscle, bones, and joints; itching; abdominal pain; vomiting; cough; decreased appetite; and shortness of breath.

These are not all the possible side effects. For more information, ask your healthcare provider or pharmacist. Call your doctor for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

YERVOY (5mg/mL) is an injection for intravenous (IV) use.
Contact your oncologist immediately if you experience any symptoms listed on this Signs and Symptoms Checklist or if they get worse, or if you experience anything unusual while on OPDIVO® (nivolumab) or OPDIVO + YERVOY® (ipilimumab) therapy. Getting medical treatment right away may keep the problem from becoming more serious.

These are not all of the possible side effects of OPDIVO and OPDIVO + YERVOY. This is why you need to report any discomfort or changes in the way you are feeling to your Oncology Care Team.

Do not treat Signs and Symptoms yourself without talking to your oncologist.

Your oncologist may decide to delay or completely stop OPDIVO or OPDIVO + YERVOY or give you other medicines to treat your symptoms.

Please see Important Safety Information for OPDIVO® (nivolumab) and YERVOY® (ipilimumab), including Boxed WARNING for YERVOY regarding immune-mediated side effects, on the following page and the U.S. Full Prescribing Information and Medication Guide for OPDIVO and YERVOY.

YERVOY (5 mg/mL) is an injection for intravenous (IV) use.

OPDIVO® (nivolumab) is a prescription medicine used in combination with YERVOY® (ipilimumab) to treat:

- people with a type of skin cancer called melanoma that has spread or cannot be removed by surgery (advanced melanoma)
- adults and children 12 years of age and older, with a type of colon or rectal cancer (colon or rectal cancer) that has spread to other parts of the body (metastatic), is microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), and you have tried treatment with a fluoropyrimidine, oxaliplatin, and irinotecan, and it did not work or is no longer working. OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- adults and children 12 years of age and older with a type of colon or rectal cancer (colon or rectal cancer) that has spread to other parts of the body (metastatic), is microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), and you have tried treatment with a fluoropyrimidine, oxaliplatin, and irinotecan, and it did not work or is no longer working. OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- adults and children 12 years of age and older with a type of colon or rectal cancer (colon or rectal cancer) that has spread to other parts of the body (metastatic), is microsatellite instability-high (MSI-H) or mismatch repair deficient (dMMR), and you have tried treatment with a fluoropyrimidine, oxaliplatin, and irinotecan, and it did not work or is no longer working. OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- adults and children 12 years of age and older with a type of skin cancer called melanoma that has spread or cannot be removed by surgery (advanced melanoma)
- people with a type of skin cancer called melanoma (urothelial carcinoma) that has spread or grown and you have tried treatment that contains platinum and it did not work or is no longer working
- people with bladder cancer (urothelial carcinoma) that has spread or grown and you have tried treatment that contains platinum, and it did not work or is no longer working. OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- people with a type of skin cancer called melanoma (urothelial carcinoma) that has spread or grown and you have tried treatment that contains platinum, and it did not work or is no longer working. OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- people with liver cancer (hepato cellular carcinoma) after you have received treatment with Nexavar® (sorafenib). OPDIVO was approved based on response rate and how long patients’ responses lasted. There is ongoing evaluation of clinical benefit of OPDIVO for this use.
- people with a type of skin cancer called melanoma to help prevent melanoma from coming back after it and lymph nodes that contain cancer have been removed by surgery. It is not known if OPDIVO is safe and effective in children younger than 12 years of age with MSI-H or dMMR metastatic colorectal cancer, or in children younger than 18 years of age for the treatment of any other cancers.

1. If you notice any discomfort or changes in the way you are feeling, contact your Oncology Care Team immediately.
2. Getting medical treatment right away may stop these problems from becoming more serious. Do not try to treat possible side effects yourself.
3. Your oncologist may decide to delay or completely stop OPDIVO® (nivolumab) or YERVOY® (ipilimumab) or give you other medicines to treat your symptoms.

Your oncologist may decide to delay or completely stop OPDIVO® (nivolumab) or YERVOY® (ipilimumab) or give you other medicines to treat your symptoms.

These are not all of the possible side effects of OPDIVO and OPDIVO + YERVOY. This is why you need to report any discomfort or changes in the way you are feeling to your Oncology Care Team. Signs or changes to look out for include...

**Brain**
- headache
- fever
- tiredness or weakness
- confusion
- memory problems
- sleepiness
- seeing or hearing things that are not really there (hallucinations)
- seizures
- stiff neck

**Liver**
- yellowing of your skin or the whites of your eyes
- severe nausea or vomiting
- pain on the right side of your stomach area (abdomen)
- drowsiness
- dark urine (tea colored)
- bleeding or bruise more easily than normal
- feeling less hungry than usual
- decreased energy

**Lungs**
- new or worsening cough
- chest pain
- shortness of breath

**Intestines** (colitis that can lead to tears or holes in your intestine)
- diarrhea (loose stools) or more bowel movements than usual
- blood in your stools or dark, tarry, sticky stools
- severe stomach area (abdomen) pain or tenderness

**Hormone Glands**
- (especially the thyroid, pituitary, adrenal glands, and pancreas)
- headaches that will not go away or unusual headaches
- extreme tiredness
- weight gain or weight loss
- changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness
- dizziness or fainting
- hair loss
- feeling cold
- constipation
- voice gets deeper
- excessive thirst or lots of urine

**Kidneys**
- (including nephritis and kidney failure)
- decrease in the amount of urine
- blood in your urine
- swelling in your ankles
- loss of appetite

**Other Organs**
- changes in eyesight
- severe or persistent muscle or joint pains
- severe muscle weakness
- chest pain

**Severe Infusion Reactions**
- chills or shaking
- itching or rash
- flushing
- difficulty breathing
- dizziness
- fever
- feeling like passing out

**Skin**
- rash
- itching
- skin blistering
- ulcers in mouth or other mucous membranes

**Liver**
- yellowing of your skin or the whites of your eyes
- severe nausea or vomiting
- pain on the right side of your stomach area (abdomen)
- drowsiness
- dark urine (tea colored)
- bleeding or bruise more easily than normal
- feeling less hungry than usual
- decreased energy
